

UNITO C | E

Universal Cutting Tool

The Universal Cutting Tool allows you to process many different materials precisely and efficiently. The tool can be used for the Thru Cut processing method.

UNITO is suitable for cutting through and scoring a wide range of materials. Zünd particularly recommends using this tool for processing cardboard and various films.

The use of drag knives makes it possible to achieve very high processing speeds. In addition to this, the purchase and maintenance costs for UNITO are significantly lower than for driven tools.

To cut through the material, UNITO also has a sprung glide shoe (included in delivery). The exact cutting depth is set via the Zünd Cut Center – ZCC.

Details

Max. material thickness: 5 mm

Available in four variants:

- Unito C-6 (for centered knives 0.63 mm thick)
- Unito C-15 (for centered knives 1.5 mm thick)
- Unito E-6 (for off-centered knives 0.63 mm thick)
